Note: For matching Corners and Joints, see Page 8

Useful Information

- All Jumbo™ boards have been tested by the British Board of Agrément and found suitable to support all eaves tiles in common usage in the UK (up to 10kg, load per 1 metre length of fascia) at all roof pitches, subject to the boards being fixed to rafter ends at a maximum of 600mm spacings.
- Gutter brackets can be fixed directly to Jumbo boards. Tests have been carried out in accordance with BS 4576: Part 1:1989, using various third party gutter brackets, and no failure occurred at the specified test weight.
- Swish roofline profiles have adequate resistance to wind loading up to five storeys, provided they are fixed at the recommended fixing centres. See the Swish Roofline Design Guide for fixing guidance.

Note: For matching Corners and Joints, see Page 8

Useful Information

- All White 16mm fascia profiles can be fixed to rafter feet using 2 x 65mm Trimtop nails at each end and at maximum 600mm centres, we recommend 400mm centres for coloured profiles.
- PVC gutters may be screw-fixed directly to 16mm fascias. Gutter bracket spacings must not exceed 1m. Other lightweight gutters may also be screw-fixed to the boards, provided the maximum bracket loading is not exceeded.
- A range of 16mm Square Fascias is also available in Mahogany, Light Oak, Rosewood, Irish Oak, Black, Anthracite Grey, Agate Grey, White and Cream woodgrain finishes, see Page 17 for further details.
- Further installation information can be found on the reverse of the Swish 10 Year Guarantee for Coloured Profiles. For your copy please contact the Marketing Team on 01827 317212 or e-mail marketing@swishbp.co.uk or view it here www.swishbp.co.uk/library/guarantees.

Useful Information

Measurements Key:

- The orientation and spacing of Dentils is worth careful consideration in order to achieve the best effect. In addition, a continuous sub-fascia of cellular PVC fixed to the wall under the soffit will greatly enhance the effect.
- Swish Gallows Brackets are load bearing to an end loading capacity of 75kg per gallow and capable of offering structural support to door and window canopies. The surface pattern mimics the traditional appearance of timber with a high level of bevelling detail.

Useful Information

- For added protection, a factory fitted fine mesh is available on Polo boards subject to minimum order quantities. Contact our Sales Dept. for further information.
- A selected range of Gee Pee and Polo profiles is also available in Mahogany, Light Oak, Rosewood, Irish Oak, Black, Anthracite Grey, Agate Grey, White and Cream foiled finishes. See Page 17 for details.
- Coloured profiles can suffer from excessive expansion due to heat absorption. Specifiers and installers must therefore satisfy themselves that sufficient provision has been made to avoid significant thermal movement. It is the specifiers and installers responsibility to determine the actual requirement of a particular installation to avoid excessive thermal movement.

™Gee Pee, Tee Gee and Polo are Registered Trade Marks

Useful Information

- Fixing of window boards to dry, sound timber or masonry substrates is effected with Swish General Purpose Adhesive (C079). If there is a risk of damp, after fixing use Swish Low Modulus Silicone (C077). DO NOT fix to surfaces which are damp.
- Rotten or extensively damaged timber should be removed prior to over-capping.
- Bullnose Window board and Cappit™ profiles are also available in foiled finishes, Mahogany, Light Oak, Irish Oak and Rosewood (see Page 19 for further details).
- Reveal corners can be neatly finished with the Cappit™ Reveal Corner, thus avoiding mitring (C271 featured on Page 14).

Useful Information

- See Page 20 for details of our extended range of Mahogany, Light Oak, Rosewood, Irish Oak, White, Cream, Anthracite Grey, Chartwell Green, Black, Anthracite Grey Smooth, Sage, Claystone and Pebble Grey foiled Skirtings and Architraves.
- 12mm Ogee profile (C225) is particularly useful as a decorative addition to bargeboards. Fitted above the Roofstyle System, it adds depth and decorative detail.

Useful Information

- Foiled PVC-ue installations can suffer from excessive expansion and contraction due to heat absorption. Specifiers and installers must therefore satisfy themselves that sufficient provision has been made to avoid significant thermal movement. It is the specifiers and installers responsibility to determine the actual requirement of a particular installation to avoid excessive thermal movement.
- Allow a minimum of 50mm vented airspace to the rear of the cladding installation.** At the bottom edge of the cladding, omit the horizontal batten to allow a free air path between vertical battens. Continuity of the ventilation path can be achieved by venting into the eaves or leaving a 10mm air gap between the cladding and soffit. Angle ventilators C061 and C065 (or similar) can be installed to stop insect ingress. At all joints, end abutments, corners and top edge terminations, allow a 5mm expansion gap at each board end.

Window Boards (Foiled Profiles)

Useful Information

- Fix with Swish Low Modulus Silicone or Swish General Purpose adhesive to dry substrates only. Where there is a risk of heat build-up, introduce an expansion gap and fill with silicone if necessary.
- Foiled surfaces should be cleaned regularly with a damp, soft cloth. If necessary, a mild detergent or soap in luke warm water can be used. Polishes should be avoided, as should any abrasive or organic solvent cleaners.
- Further installation information can be found on the reverse of the Swish 10 Year Guarantee for Foiled Profiles. For your copy please contact the Marketing Team on 01827 317212, e-mail marketing@swishbp.co.uk. www.swishbp.co.uk/library/guarantees
