Water Management Policy

Swish Building Products recognises that water is a valuable natural resource that should be conserved. Water is a critical resource used at Swish Building Products during our manufacturing process. Water is used for cooling during the mixing and extrusion process as well as for domestic purposes. It is the policy of Swish Building Products to make all practicable and reasonable attempts to use water efficiently and to reduce demand within its operations. To achieve this Swish will:

- Monitor and measure water usage across the site in order to identify the most significant areas of use and prioritise these areas for reduction measures
- Monitor for leakage and repair leaks quickly
- Set water consumption targets
- Explain the water management policies to employees and involve them in achieving the target
- Install water saving devices for employee washing and toilet facilities
- Invest in new developments in technology and plant, which may help to increase the efficiency of water use
- Continue to operate closed water systems within manufacturing in order to reuse as much water as possible
